

TSE 5000/6000 - FAQ (Frequently Asked Questions)

Emergency lock

How to open by use of the emergency lock?

If the TSE needs to be opened by use of the emergency lock, please insert the emergency key below the knob and turn it a quarter-turn clockwise (90°). Then turn the knob the same way it would be done after a valid code entry via the Keypad or after pressing the E-key and open the door. **It's not enough to just turn the emergency key!!!**

How is the emergency lock closed?

The key must be turned a quarter-turn counter-clockwise and then pulled out of the lock. Afterwards please turn the knob two times in both directions, to restore the freewheel.
