Description

Free App for programming of locks of the series secuENTRY of BURG-WÄCHTER.

With the exclusive secuENTRY PC software (Light, System, System+) you can conveniently administer entire locking systems as well as single locks and then conduct the programming of locks or the whole locking system via Bluetooth 4. LE with the help of the ConfigApp.

The secuENTRY software creates a zip file during the transmission process. Via email, it is being transferred to and unzipped in a selected folder. The file is automatically being added to the ConfigApp and the chosen locks can be programmed.

Compatibility Apple iPhone 4S, 5, 5S, 6, 6P from IOS 8.1.3

Please check in the App description with which further smart devices the App can be used.

Where and how can one download the ConfigApp?

With entering the search keyword „**secuENTRY**" in the App Store, you are immediately being directed to the download area of the App.

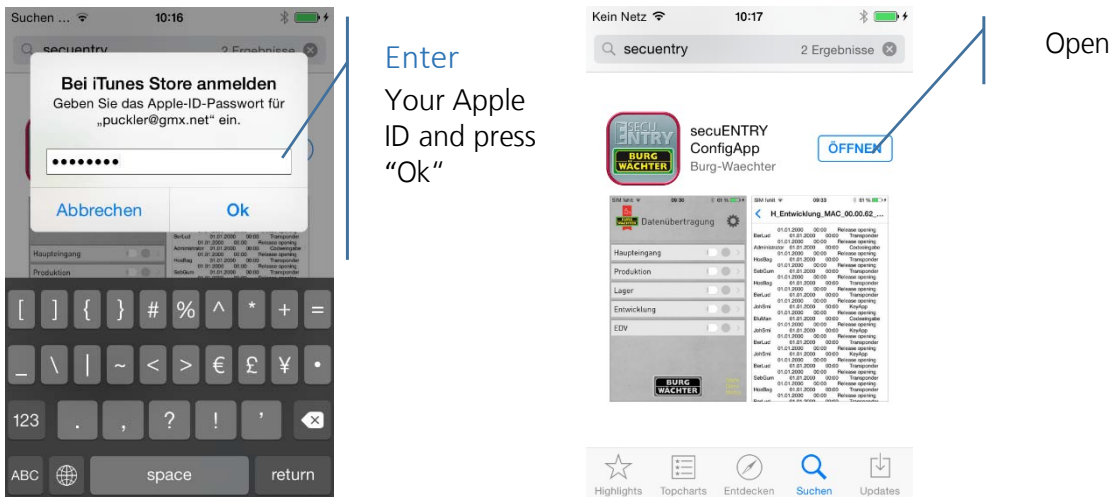

Select
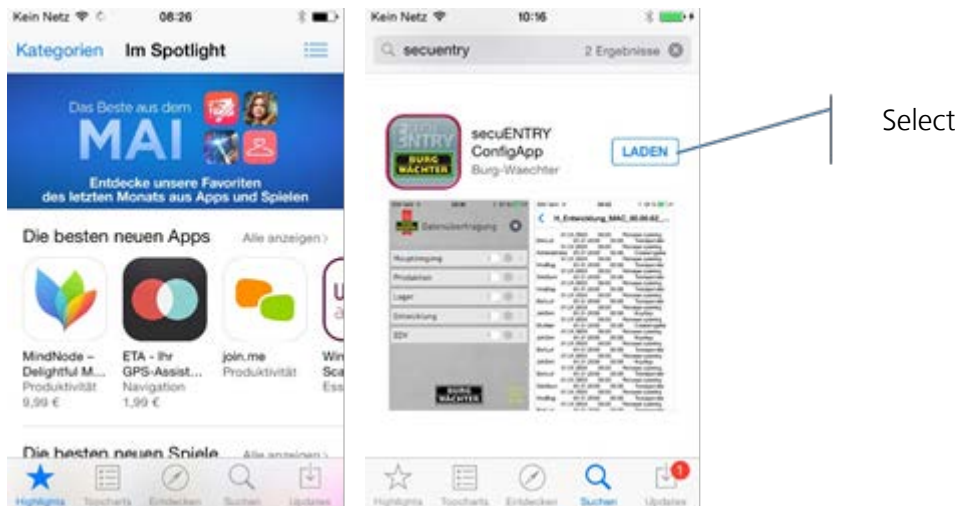

Install

After the installation, the ConfigApp is immediately operational

**Enter**
Your Apple ID and press "Ok"

Open

With the first starting of the App, the licence terms need to be accepted. Read the conditions and confirm with "OK".

How are the about to be programmed locks added to the ConfigApp ?

In the ENTRY software and during the sending of the data, the zip file is created inside the menu "Data transmission".

1. Send to yourself the about to be programmed data set in zipped form via email.

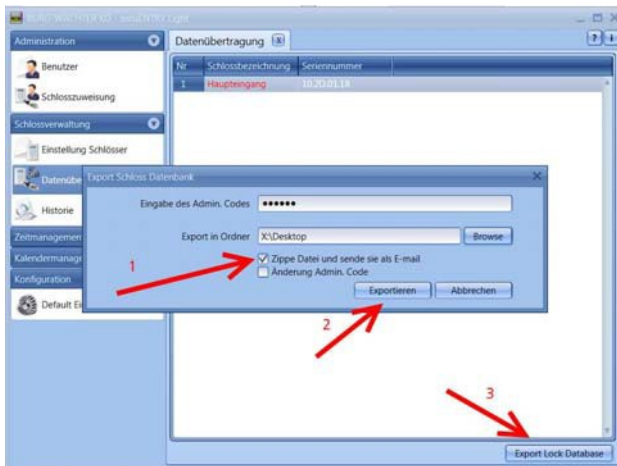

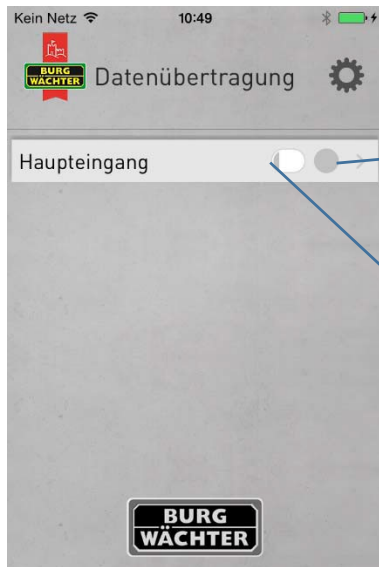

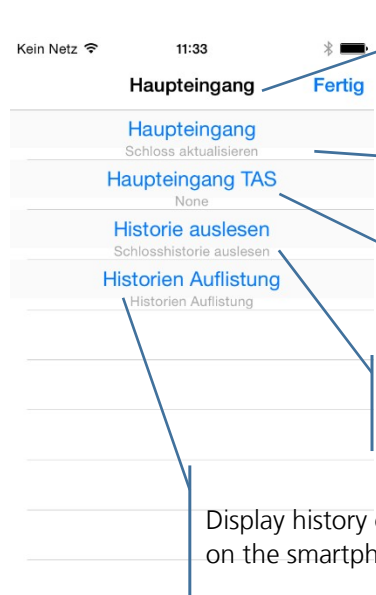

2. Open the attachment with the ConfigApp

The transmitted locks now appear in the lock list.

3. Select a lock for programming, a selection of the possible programming options appears.

## What further functions offers the ConfigApp?

Under "settings", various other functions are available for you

Settings

Entry of the administrator password

Protection of the App with separate password

Information on version numbers and licence terms

1. Entry of the administrator code

Enter the administrator code of the about to be programmed locking system. This is handy, as you can draw on the preset administrator code during programming of the units without entering the code all over again with each programming.

2. Protect the App with a separate password.

This password needs to be entered with the starting of the App.

3. Display of version numbers

Here you can find information on the App version and on the licence terms.
